# Thermo Scientific Model 15i Hydrogen Chloride Analyzer

Gas filter correlation analyzer

The Thermo Scientific<sup>™</sup> Model 15*i* Hydrogen Chloride (HCl) Analyzer utilizes gas filter correlation technology to measure the amount of Hydrogen Chloride in the sample.

- Ethernet connectivity for efficient remote access
- Enhanced user interface with one button programming and large display screen
- Flash memory for increased data storage and user downloadable software
- Enhanced electronics design optimizes product commonality
- Improved layout for easier accessibility to components

The Thermo Scientific Model 15*i* analyzer is based on the principle that HCl absorbs infrared radiation at a wavelength of 3.4 microns. Because infrared absorption is a nonlinear measurement technique, it is necessary for the instrument electronics to transform the basic analyzer signal into a linear output.

The Model 15*i* analyzer uses an exact calibration curve to accurately linearize the instrument output over any range up to a concentration of 5,000ppm.

This state-of-the-art gas analyzer offers features such as an Ethernet port, flash memory for increased data storage and is field-upgradable.

Ethernet connectivity provides efficient remote access, allowing the user to download measurement information directly from the instrument without having to be on-site.

Easily programmable shortcut keys allow you to jump directly to frequently accessed functions, menus or screens. The larger interface screen can display measurement information and status while viewing menu and operational screens.
