Introduction

The Thermo Scientific Model 42*i*-LS Analyzer is a single chamber, single photomultiplier tube design that cycles between the NO and NO_x modes.

The 42*i*-LS Analyzer has independent outputs for NO, NO₂, and NO_x, and each can be calibrated separately. Dual range and auto range are standards features as well.

If required, the instrument can be operated continuously in either the NO or ${\rm NO_x}$ modes allowing for response times of less than five seconds.

Temperature and pressure correction are standard features. User settable alarm levels for concentration and for a wide variety of internal diagnostics are available from an easy to follow menu structure.

This state-of-the-art gas analyzer offers features such as an Ethernet port

Thermo Scientific™ Model 42*i*-LS Low Source NO-NO₂-NO_X Analyzer as well as flash memory for increased data storage.

Ethernet connectivity provides efficient remote access, allowing the user to download measurement information directly from the instrument without having to be on-site.

Easily programmable short cut keys allow you to jump directly to frequently accessed functions, menus or screens. The larger interface screen can display up to five lines of measurement information.
